International Association of Software Architects
www.iasarchitects.org

The International Association of Software Architects (IASA) is a nonprofit organization dedicated to the advancement and sharing of issues related to software architecture in the enterprise, product, education, and government sectors. IASA functions as an umbrella organization to chapters spread throughout the world, and as a driving force for research and standards that advance the understanding of software architecture. IASA helps sustain city chapters by forming software architecture user groups and by fostering the sharing of ideas and information between these city groups and industry leaders.

International Enterprise Architecture Center
www.ieac.org

The International Enterprise Architecture Center (IEAC) is a global, independent, nonprofit professional membership organization dedicated to the dissemination of knowledge about enterprise architectures, management, and the marketplace to help members strengthen their performance and better serve society. The IEAC assists in the development of enterprise architecture frameworks, methods and disciplines across all enterprise environments.
